Converting PDFs to Markdown in the browser with pdftomd.tools

pdftomd.tools is a free online PDF to Markdown converter that runs entirely in your browser using Mozilla's pdf.js, so files never leave your device.

How it works: drop a text-based PDF, preview the Markdown, then copy or download a `.md` file.

What it keeps: - headings and paragraphs - bullet and numbered lists - simple tables - monospace text as code blocks

Limits worth knowing: it works on text-based PDFs only. Scanned PDFs need OCR, which it does not run. Bold/italic and figures are not exported yet.
